SUMMARY

Full-stack developer focused on Java/Spring Boot on the back end and React/TypeScript on the front end, with 3+ years of professional experience across development and QA. I build web applications end to end — REST APIs, JWT authentication, relational databases and modern interfaces — and bring from QA the habit of writing testable code and anticipating edge cases. Experienced delivering systems for real clients, from requirements to production.

EXPERIENCE

GFSIS **2024 — Present**

Mid-level QA Analyst (promoted from Junior) · also working on development

- Manual and automated testing (Python + Selenium, Cypress + TypeScript) on a corporate Java web system, reducing the bug rate per release.
- Built an internal QA platform (Next.js, Express, Prisma, PostgreSQL) that uses AI to generate test scenarios and integrates with the Jira API — creating subtasks and updating statuses automatically; adopted by the team.
- Take on development tasks in the same Java system, from bug fixes to new improvements.

Sommar Consultoria **2023 — 2024**

Junior Software Developer (Desktop)

- Built and maintained Java desktop applications, applying object-oriented design and sound architecture practices.

PROJECTS

Student Management & Recurring Payments — Spring Boot, Java 21, Next.js, PostgreSQL

- System for a gym (real client) with hexagonal architecture, JWT auth, encrypted CPF, Flyway migrations, a scheduled overdue-payment job and automated PR code review.

Health Center Triage System (thesis) — Spring Boot, Java 21, Next.js, PostgreSQL

- Risk classification based on the Manchester Triage System and an urgency-ordered care queue, with role-based JWT auth (admin, professional, patient) and a step-by-step triage wizard for patients.

FinUp — Spring Boot, Spring Security, React, TypeScript, PostgreSQL

- Expense manager (real client): JWT, password recovery by e-mail, installments, charts, Excel export and a Swagger-documented API. Owned the back end and database.

Atividade Atleta — Node.js, React, TypeScript, PostgreSQL, Mercado Pago

- Sporting-event registration platform in production (atividadeatleta.com.br) with Mercado Pago payments.

Painel Faculdade — Next.js, Express, Prisma, PostgreSQL

- Academic platform in production (Vercel + Neon) integrated with Google Classroom and Calendar, with spaced-repetition flashcards and an automatic study schedule.

SKILLS

Back end:	Java, Spring Boot, Spring Security (JWT), Spring Data JPA/Hibernate, Flyway, REST, Node.js/Express
Front end:	React, Next.js, TypeScript, JavaScript, Tailwind CSS
Data & DevOps:	PostgreSQL, MySQL, Prisma, Docker, Git, GitHub Actions, Vercel
Quality:	JUnit, Vitest, Cypress, Selenium, manual and automated testing, Jira
Languages:	Portuguese (native), English (technical reading)

EDUCATION

B.Sc. in Computer Science — UNIFOR-MG **2023 — 2026**

Courses: Complete Java – OOP (Udemy, 2024) · React from Zero to Mastery (Udemy, 2024) · Automated Testing + Software Testing (Udemy, 2025) · Web Front-end Fundamentals (Udemy, 2023)
